## **IMPRESSIVE SURROUND SOUND RIGHT OUT OF THE WALL - IW150T AND C15S**

By Fidelity Online

### **CUSTOM INSTALLATION TRIPOLE AND SUBWOOFER FROM M&K SOUND**

" The sound of the best cinemas in the world in your own four walls – this dream becomes reality with the M&K IW150T tripole speakers and the C15S subwoofer.

Modern surround formats such as Dolby Atmos or DTS-X offer an enormously more immersive sound experience. However, they require a comparatively large number of loudspeakers, which often conflicts with a visually appealing room design. M&K Sound is aware of this problem and, with the IW150T Tripole Surround speaker, has a revised version of its legendary S150T model in its portfolio, which for the first time can be seamlessly integrated into the wall for an invisible installation. Together with the C 15S installation subwoofer and its specially adapted power amplifier VA500 Blue Edition, it enables an impressive home cinema experience with invisible loudspeaker installation - ideal for sophisticated, state-of-the-art surround systems.

## **M&K AUDIO IW150T: REFERENCE SOUND "OUT OF NOWHERE"**

The S150T surround speaker from M&K Sound has become famous for uniquely enveloping the listener with its revolutionary tripole arrangement of the individual drivers. With the IW150T, M&K Sound was able to realize these virtues for the first time in a loudspeaker that can be installed flush in a wall. Equipped with the high-quality chassis and crossover of its famous sister model, the IW150T offers the same outstanding sound characteristics. For an even more inconspicuous integration of the IW150T into the listening room, the white cover can be painted as desired. The IW150T Tripole speaker brings legendary M&K Sound acoustic performance to a completely invisible installation.

# M&K SOUND C15S AND VA500 BLUE EDITION: SOLID FOUNDATION

The subwoofer C15S from M&K Sound impresses with a powerful bass foundation and outstanding level stability. Although only equipped with a single speaker, it delivers acoustic performance values comparable to those of the 10" dual push-pull subwoofer X10. This makes the C15S the perfect solution for large custom installations. The C15S was developed from scratch together with the VA500 Blue Edition power amplifier in order to make even the lowest frequencies not only audible but also tangible.

The C15S is delivered together with the matching power amplifier VA500 Blue Edition. The power amplifier is a further development of the Class D amplifiers that are already used in the well-known subwoofers of the V series from M&K Sound. This power amplifier is also characterized by maximum efficiency, low heat generation and low standby power consumption. The Class D powerhouse VA500 Blue Edition was specially tailored to the C15S subwoofer in careful development work and impresses with accurate impulse stability and almost inexhaustible power reserves even with demanding music material and bombastic film scenes.
